

Opening talk

Titre: Facing the global cyber threat

Summary:

The world we live in has a real underground cyber economy. People are paid to write malwares, companies rely on the Internet and botnets are not imaginary. Are the deployed tools suitable to face this cyber-crime challenge? What are the caveats and what can we do to improve this situation? This talk will spot some problems we have today and give some ideas to face it.

Bio:

Sebastien Tricaud is an international speaker and developer on subjects in and around intrusion detection systems. Leader of the French honeynet chapter, the vision given by this project on what is really happening gives a practical touch.

He is also of the developer of various famous free software such as Linux PAM, Prelude and Picviz.
